

YOUR 7-DAY PLAN

Fast Start Action Plan

Follow this checklist in order.
Every task is specific and sequenced.

Complete Day 1 before moving to Day 2.
Your first 3 videos will be live by Day 7.

The Launch Kit · Module 02

Day 1 — Account Setup

Goal: Every tool created, verified, and connected before you create a single second of content.

- **Create your Google Account**
Use a new account separate from your personal Gmail. This is your new channel's business identity.
- **Set up your YouTube Channel**
Name it around your niche. Select 'For myself' during setup. Upload a simple banner — Canva has free templates.
- **Create your Canva account**
Free plan is sufficient. You'll use this for thumbnails and channel art.
- **Set up ElevenLabs account**
Free tier gives you 10,000 characters/month. Upgrade to Starter (\$5/mo) before you publish.
- **Create InVideo AI account**
Free tier available. Upgrade to Plus (\$25/mo) for watermark-free exports.
- **Set up VidIQ**
Free browser extension. Connect to your YouTube channel for keyword research.
- **Apply for Google AdSense**
Takes 1–2 weeks to approve — apply today so it's ready when you qualify.
- **Create Linktree account**
You'll use this in your video descriptions to link all income streams from one URL.

Day 2 — Niche Selection & First 3 Topics

Goal: Niche confirmed with data. First 3 video topics chosen and ready to script tomorrow.

- **Open the Niche Pack**
Review all 5 niches. Cross-reference with VidIQ keyword data for your region.
- **Validate your niche choice**
Search your niche on YouTube. Are there channels with 100K+ subs? Good — demand exists. Any with under 5 years and 500K+ subs? Even better.
- **Choose your first 3 video titles**
Pick 3 from the Niche Pack. Choose titles with clear search intent — 'How to', 'Best', 'Complete guide'.

- **Check search volume in VidIQ**
Each title should show search volume in VidIQ. Aim for 'Good' or above competition score.

- **Note your affiliate programmes**
The Distribution System covers monetisation fully — but look up 2–3 affiliate programmes in your niche today so they're ready.

Day 3 — Script Writing With AI

Goal: All 3 scripts generated, reviewed, and saved. Ready for voiceover tomorrow.

- **Open the Prompt Vault**
Start with Prompt 1 — the video script generator. Read the full prompt before copying.
- **Generate Script 1**
Copy Prompt 1. Replace [TOPIC] with your first video title. Paste into ChatGPT or Claude. Review the output — run the revision prompt if needed.
- **Generate Script 2**
Repeat for video title 2. Each script should be 800–1,200 words for a 6–8 minute video.
- **Generate Script 3**
Repeat for video title 3.
- **Quality check all 3 scripts**
Read each aloud (or use text-to-speech). Does it flow naturally? Does it answer the search intent? Are there any obvious AI tells to remove?
- **Save all 3 scripts**
Save as Google Docs or Word files. You'll need them for voiceover and for the video production tool.

Day 4 — Voiceover Generation

Goal: All 3 scripts turned into professional AI narration. 3 MP3 files ready for video production.

- **Log into ElevenLabs**
Go to VoiceLab → Speech Synthesis.
- **Select your voice**
Browse the voice library. Look for voices in the 'Narration' or 'News' category. Listen to at least 10 before choosing. Consistency matters — use the same voice for all videos on this channel.

- **Set voice settings**
Stability: 0.45. Similarity Boost: 0.85. Style: 0.15. These settings produce natural, authoritative narration.

- **Generate voiceover for Script 1**
Paste your script in sections (ElevenLabs has a character limit per generation). Download each section as MP3.

- **Combine MP3 sections**
Use Audacity (free) or GarageBand to join the sections into one continuous MP3 file.

- **Repeat for Scripts 2 and 3**
Same process. Label files clearly: video1_vo.mp3, video2_vo.mp3, video3_vo.mp3.

- **Quality check audio**
Listen to the full voiceover for each video. Any mispronunciations? Re-generate those sections only.

Day 5 — Video Production

Goal: All 3 videos built in InVideo AI. Publish-ready MP4 files exported.

- **Log into InVideo AI**
Select 'AI video' → 'YouTube video'.

- **Paste Script 1**
InVideo will suggest a video structure. Accept or adjust.

- **Upload your voiceover**
Replace InVideo's auto-generated voice with your ElevenLabs MP3. Select 'Upload audio'.

- **Review every clip**
InVideo selects stock footage automatically. Go through every clip — replace anything that doesn't match the narration. This is the most important step.

- **Add background music**
InVideo has a royalty-free library. Choose something subtle — it should not compete with the voiceover. Set volume to 8–12%.

- **Export Video 1**
Export at 1080p. This takes 5–15 minutes depending on video length.

- **Repeat for Videos 2 and 3**
Same process. Allow 1–2 hours per video for your first time.

Day 6 — Edit, Caption & Thumbnail

Goal: All 3 videos polished, captioned, and with click-ready thumbnails.

- **Import Video 1 into CapCut**
Free desktop app. Import your exported MP4.
- **Add auto-captions**
CapCut → Captions → Auto Captions. Review and correct any errors. Captions improve watch time by 12–15% on average.
- **Add background music**
If you didn't add it in InVideo, add here. CapCut has a royalty-free library.
- **Create Thumbnail for Video 1**
Open Canva. Search 'YouTube thumbnail'. Use bold text (3–5 words max), high contrast, and an emotional or curiosity-driven image.
- **Check thumbnail at small size**
Shrink it to 120px wide in Canva. Can you still read it? Can you tell what it's about? If not, simplify.
- **Repeat for Videos 2 and 3**
Edit, caption, and thumbnail all three today.
- **Export all 3 final videos**
Export from CapCut at 1080p, 30fps. Label: video1_final.mp4, etc.

Day 7 — Upload, Optimise & Launch

Goal: All 3 videos live on YouTube, fully SEO optimised. Your channel is open.

- **Open Prompt Vault — SEO prompts**
Use Prompt 12 (title optimiser) and Prompt 13 (description generator) for each video.
- **Upload Video 1**
YouTube Studio → Upload. While uploading, work on the metadata.
- **Optimise title**
Use your Prompt Vault-generated title. Keep it under 60 characters. Include your primary keyword near the front.
- **Write description**
Use Prompt 13 output. First 2–3 lines are critical — they show before 'Show more'. Include your Linktree link in the first 3 lines.
- **Add tags**
Use VidIQ to find 5–8 related tags. Include your primary keyword, variations, and related terms.
- **Add to a playlist**
Create a playlist for your niche. Adding videos to playlists improves indexing speed.

■ Set end screens and cards

Add end screen 20 seconds before the end. Link to your other videos. Add a Subscribe card.

■ Upload Videos 2 and 3

Schedule them 2–3 days apart rather than uploading all at once. Spacing improves algorithmic distribution.

■ Begin Module 03 — Distribution

Your videos are live. Now begin the Distribution System module to multiply reach across 5 platforms.
